DXF, DXF, DWG and DWF Files AutoCAD files are structured drawing files that contain two kinds of objects: geometric and non-geometric. Objects are organized in drawings into a set of layers. When an object is created, or an existing object is copied, attributes such as color, linetype, linewidth, transparency, etc., are applied. AutoCAD does not contain graphics rendering capabilities and does not support the creation of user interface elements like dialog boxes, tabs, etc. It does however provide interfaces to automatically detect and outline an object and the user interface and tools to modify the attributes of a selected object. The AutoCAD Extensibility Architecture, AEA, is a library of AutoCAD functions that can be loaded and used by third-party applications. The Drawing and Project Environment: AutoCAD supports two main work environments: Drawing and Project Environment (D&PE): A set of tools to open, modify, and manage drawings in AutoCAD. The project environment supports project templates, project roles, project hierarchies, and project file types. Drawing Environment (DE): A set of tools to open, manage, and modify individual drawings. Core Functionalities Users can obtain most core AutoCAD functionalities by creating drawings. A user creates a drawing by defining a drawing area using drawing area modes, creating objects using drawing object modes, and applying attributes, such as colors, linetypes, and linewidths. Attributes can be assigned to objects within the drawing area. When an object is created or copied, attributes are assigned. Any attribute can be applied to an object by using the appropriate palette. Drawings can be saved into a drawing template. Each AutoCAD drawing template allows for multiple files to be organized into a project. Each drawing has an associated project or folder and can be added to a project in multiple ways. Drawings can be edited in the drawing environment. A layer can contain one or more drawings. It is possible to select objects on a layer and edit them in the drawing environment. A drawing can be exported to a DXF file. User Interface AutoCAD comes with a graphical user interface that is designed to be easy to use. Work Areas There are two types of user interfaces in AutoCAD: the drawing environment and the project environment. They are: The drawing environment is the ca3bfb1094
